Experience

Software Development Engineer Jan. 2025 – Present
Amadeus Software Labs *India*

- Built reporting workflows combining Splunk telemetry and SQL data; ran independent queries concurrently with Python multiprocessing, structured logging, and progress reporting.
- Built and deployed a Meta-RAG framework for the Loyalty Portal chatbot, using multi-stage contextual validation to improve response grounding.
- Developed Python and Java automation for application security and modernization, including a Black Duck API v2 tool that reduced manual security-developer work by 40%.

AI–ML Virtual Intern May 2023 – Jul. 2023
AWS Academy *Virtual*

- Implemented machine-learning pipelines in Amazon SageMaker covering data collection, feature engineering, model training, deployment, and evaluation.

Selected Projects

CUDA Neural Network Kernel Lab Personal project
C++, CUDA, Python, NVIDIA Nsight Compute

- Built C++ and CUDA implementations of matrix multiplication and ReLU for a small neural-network forward pass, with a CPU reference for output comparison.
- Implemented a shared-memory tiled matrix-multiplication kernel and compared thread-block configurations using CUDA events and NVIDIA Nsight Compute.
- Added numerical checks against the CPU reference and Python scripts to summarize kernel timings across matrix sizes, separating execution time from host-device transfers.

GMS Knowledge Bot 2025; Amadeus
Python, LangChain, Azure OpenAI, ChromaDB, Streamlit

- Built an internal knowledge assistant that classifies questions by intent and adapts document retrieval and answer-generation settings for each query.
- Implemented retrieval and generation with LangChain, Azure OpenAI, and ChromaDB; built a Streamlit interface for answers, routing decisions, logs, and query history.

Crowd Detection & Management System 2023
Python, YOLOv8, OpenCV, Telegram API

- Collected and labeled data for a YOLOv8 crowd-density detection pipeline with a reported 80% accuracy; implemented a real-time Telegram alert bot for crowd management.

Technical Skills

Languages / Data: Python, Java, C, SQL, Python Multiprocessing, PostgreSQL, Splunk
AI / ML: TensorFlow, Deep Learning, Computer Vision, YOLOv8, OpenCV, CNNs, RAG, Azure OpenAI
Engineering: Software Design, Data Structures and Algorithms, Git, Docker, Linux, REST APIs, AWS

Certifications & Achievements

- **Claude Certified Architect, Foundations** – Anthropic; **GATE Qualified** (2023).
- Solved 1,000+ LeetCode problems; led technical-event planning and execution as a Technical Club Member at RCOEM Nagpur.

Education

B.Tech., Computer Science and Engineering (AI & ML) Aug. 2021 – Jul. 2025
RCOEM Nagpur CGPA: 8.23/10
Coursework: Machine Learning, Deep Learning, Neural Networks, Algorithms, Operating Systems.

REVIEW PREVIEW: Invented, unbuilt personal project pending approval.
