Professional Summary

Software Development Engineer with experience building React components and writing tests, contributing to Java and Spring modernization, and integrating payments into Android applications. Also built Python data workflows and internal tools with interactive interfaces.

Experience

Software Development Engineer Aug. 2025 – Present
Amadeus Software Labs

- Built React components and wrote tests for ContX AI, a campaign-design application using Python, Azure AI Foundry, MJML, and REST APIs to turn briefs and hotel context into personalized marketing content.
- **GMS Knowledge Bot:** Built an internal knowledge assistant that classifies questions by intent and adjusts retrieval depth, generation settings, and prompts for each query.
- Built its Streamlit interface to show routing decisions, answers, execution logs, and session query history.
- **Black Duck scanner:** Built a Tkinter interface for scanning registry images or existing archives, with live progress output.
- Automated image retrieval, Podman export, and scan submission and result polling through Black Duck REST APIs; packaged the tool as a Windows executable.
- Applied AI-assisted development across four Java modernization initiatives covering Java 17, Spring 6, Spring Boot 3, and dependency upgrades.
- Built a working prototype of an AI-assisted internal developer portal that brings engineering knowledge and tools into one interface.
- Resolved a customer-reported stability defect in the currency exchange-rate synchronization service and supported AKS regression testing and deployment validation.

Software Development Intern Jan. 2025 – Jul. 2025
Amadeus Software Labs

- Built Python workflows to extract and prepare shopping, availability, and promotion data from Splunk and SQL sources for Power BI reporting.
- Migrated dashboard inputs from Excel to CSV, developed Power BI visuals and interactive Top-N property filters, and optimized DAX queries.
- Published the iHotelier dashboards, checked data and visuals during QA, and documented the extraction and reporting workflows.

Android Developer Sep. 2022 – Dec. 2022
Gear To Care *Nagpur, India*

- Integrated Razorpay for in-app payments.
- Implemented Firebase Authentication and instant and scheduled notifications.

Technical Skills

Languages: Java, Python, SQL, Go, C
Application development: React, Spring, Spring Boot, Android, Streamlit, Tkinter, REST APIs
Tools and platforms: Git, GitHub, Docker, Podman, Jenkins, Kubernetes, Azure, AWS, Splunk, Power BI, DAX

Education

Bachelor of Technology Aug. 2021 – Jul. 2025
RCOEM Nagpur *GPA: 8.23/10*
Field: Computer Science and Engineering (Artificial Intelligence and Machine Learning)
Relevant coursework: Data Structures and Algorithms (Java), Design and Analysis of Algorithms (Java), Object-Oriented Programming (Java), Operating Systems, Database Management Systems.

Additional

Solved over 1,000 LeetCode problems.
