Professional Summary

Software Development Engineer who builds Python and Java tooling, fixes production and security defects, and supports regression testing and deployment validation on Kubernetes.

Experience

Software Development Engineer Aug. 2025 – Present
Amadeus Software Labs
- Resolved a customer-reported stability defect in the service that synchronizes currency exchange rates.
- Supported Azure Kubernetes Service regression testing through issue investigation, deployment validation, and redeployments.
- Investigated and fixed application-security issues found by Black Duck, Checkmarx, and penetration testing.
- Applied AI-assisted development across four Java modernization initiatives (Java 17, Spring 6, Spring Boot 3).
- Designed and documented an internal toolkit to automate Jenkins, Kubernetes, and work-tracking workflows.

Software Development Intern Jan. 2025 – Jul. 2025
Amadeus Software Labs
- Built Python workflows to extract and prepare shopping, availability, and promotion data from Splunk and SQL sources for Power BI reporting.

Android Developer Sep. 2022 – Dec. 2022
Gear To Care *Nagpur, India*
- Integrated Razorpay in-app payments and implemented Firebase Authentication in an Android application.

Selected Internal Projects – Amadeus Software Labs

Container Image Security Scanner 2025
Python, Podman, Black Duck REST APIs, Tkinter, PyInstaller
- Automated image retrieval from Azure Container Registry, export with Podman, and scan submission and result polling through Black Duck REST APIs.
- Provided command-line tools and a programmatic interface; packaged a desktop version as a Windows executable.

Social Engagement Bot (proof of concept) 2025
Python, REST APIs, Azure OpenAI
- Implemented adaptive polling with exponential backoff and configurable interval bounds to handle API rate limits.
- Split the bot into inference, API transport, configuration, persistence, and logging modules, with separate AI and TLS test harnesses; addressed certificate-chain issues on the corporate network.

Personal Project

Linux Network Diagnostics CLI
Python, Linux, Sockets, pytest, coverage.py
- Built a Python command-line tool for Linux that checks DNS resolution, TCP port reachability, TLS certificate chains, and HTTP response times for a list of hosts, and reports interface and route details from /proc and iproute2.
- Wrote a short functional specification and a pytest suite with mocked sockets, and enforced a minimum code-coverage threshold before each commit.

Technical Skills

Languages: Python, Java, C, Go, SQL, Shell scripting
Systems and tools: Linux, Docker, Podman, Kubernetes, Helm, Jenkins, Git, PlantUML
Concepts: Computer networking, operating systems, REST APIs, debugging, system design
Certifications and achievements: Claude Certified Architect, Foundations (Anthropic); GATE Qualified (2023); 1,000+ LeetCode problems solved

Education

Bachelor of Technology Aug. 2021 – Jul. 2025
RCOEM Nagpur *GPA: 8.23/10*
Field: Computer Science and Engineering (Artificial Intelligence and Machine Learning)
Coursework: Data Structures and Algorithms (Java), Design and Analysis of Algorithms (Java), Object-Oriented Programming (Java), Computer Networks, Operating Systems, Database Management Systems, Machine Learning, Deep Learning (Python), Neural Networks, Natural Language Processing, Digital Image Processing.
