Professional Summary

Software Development Engineer working with Java 17, Spring Boot 3, React, and Python. Uses AI-assisted development in day-to-day engineering, from Java modernization and code migration to developer tooling, and builds generative AI features with guardrails for privacy and factual grounding.

Experience

Software Development Engineer Aug. 2025 – Present
Amadeus Software Labs

- Applied AI-assisted development across four Java modernization initiatives covering Java 17, Spring 6, Spring Boot 3, and dependency upgrades.
- Built a proof of concept for AI-assisted Java Spring migration that combines OpenRewrite recipes with the GitHub Copilot Agent SDK to automate legacy-code modernization.
- Built ContX AI, a campaign-design application that turns natural-language briefs and hotel guest, property, and brand context into personalized email and ad content using Python, React, Azure AI Foundry, and REST APIs.
- Implemented audience-specific variants, prompt-based editing, marketing compliance controls, and manual export, with guardrails to avoid storing personal data or fabricating property information.
- Resolved a customer-reported stability defect in the service that synchronizes currency exchange rates.
- Supported Azure Kubernetes Service regression testing through issue investigation, deployment validation, reverts, and redeployments.
- Investigated and fixed application-security issues found by Black Duck, Checkmarx, and penetration testing.
- Demonstrated practical Model Context Protocol and GitHub Copilot Skills use cases to engineering teams during internal innovation weeks.

Software Development Intern Jan. 2025 – Jul. 2025
Amadeus Software Labs

- Built Python workflows to extract and prepare shopping, availability, and promotion data from Splunk and SQL sources for Power BI reporting.

Android Developer Sep. 2022 – Dec. 2022
Gear To Care *Nagpur, India*

- Integrated Razorpay in-app payments and implemented Firebase Authentication in an Android application.

Personal Project

Payments Ledger Service
Java 17, Spring Boot, gRPC, PostgreSQL, Kafka, React, TypeScript, JUnit 5, Jest, Playwright

- Built a Java 17 and Spring Boot ledger service with REST and gRPC (Protocol Buffers) APIs, PostgreSQL storage through Spring Data JPA, and Kafka events for settled transfers.
- Developed features test-first with JUnit 5, Mockito, and Spring Boot Test, and added a React and TypeScript dashboard covered by Jest, React Testing Library, and Playwright end-to-end tests run as CI quality gates.

Technical Skills

Languages: Java, Python, SQL, Go, C
Backend and frontend: Spring, Spring Boot, REST APIs, microservices, React
Data and DevOps: PostgreSQL, Couchbase, Kafka, Git, Jenkins, Docker, Kubernetes, Helm, Argo CD, CI/CD
AI-assisted engineering: GitHub Copilot Agent SDK, OpenRewrite, Model Context Protocol, prompt engineering, LLM evaluation
Concepts: Object-oriented design, SOLID principles, design patterns, system design, data structures and algorithms
Certifications and achievements: Claude Certified Architect, Foundations (Anthropic); GATE Qualified (2023); 1,000+ LeetCode problems solved

Education

Bachelor of Technology Aug. 2021 – Jul. 2025
RCOEM Nagpur *GPA: 8.23/10*
Field: Computer Science and Engineering (Artificial Intelligence and Machine Learning)
Coursework: Data Structures and Algorithms (Java), Design and Analysis of Algorithms (Java), Object-Oriented Programming (Java), Computer Networks, Operating Systems, Database Management Systems, Machine Learning, Deep Learning (Python), Neural Networks, Natural Language Processing, Digital Image Processing.
